

**Flexible PVC Pipe**

Carries water from skimmer to Aquafalls filter. Makes installation easier!

**Extension Tube** - Allows skimmer to sit back from edge of pond making it more natural looking.

**Skimmer** - Hides pump and plumbing from view. Greatly reduces pond maintenance by skimming debris from surface. Provides an ideal spot for an automatic fill valve which replaces water due to evaporation.

**Aquafalls Filters** - Bury in the ground and when installed properly are completely hidden from view. Filters require minimal (usually once per year!) cleaning and keep the pond sparkling clean. Filter tubs also provide an ideal base for waterfalls and streams.

**Underlayment**

Provides protection against punctures in liner from sharp rocks or tree roots.

Covering liner with rocks and gravel provides additional surface area for bacteria, also hides and protects liner. Rocks and gravel look more natural than bare liner.

**45 Mil Rubber Liner**

Strong yet flexible. Liners have 20 yr. warranty.
